1 Introduction

This document describes the release notes for HexmodX version 14.2.0

Release notes is provided based on all changes since HexmodX version 14.1.0

	HexmodX		Page 7/16	Date 30.06.2021
	Release Notes HexmodX V14.2.0	RBEI/Hexmod-Team		v22.0

2 **Operating system compliance**

HexmodX version 14.2.0 is compliant to WTS 2008 Server, Windows 10 SAC 1909.

Base IO and ABM module of HexmodX are compatible with Linux operating system.

4 Summary of changes

Modifications	
ALM	Description
586841	Support of Hex compare as per new MINGW compiler HEX files
586840	Support of HEX split based on infoblock in CLI
571365	Line checksum display in GUI
457494	Consider Format ID value for dynamic expansion of MEM lay structure in VCU-P blocks

6 Bug fixes

- **None.**

	HexmodX		Page 12/16	Date 30.06.2021
	Release Notes HexmodX V14.2.0	RBEI/Hexmod-Team		v22.0

7 Effect on Hex file

- None.

	HexmodX		Page 13/16	Date 30.06.2021
	Release Notes HexmodX V14.2.0	RBEI/Hexmod-Team		v22.0

8 Expected new log file entries or console changes

- None.

	Release Notes HexmodX V14.2.0	RBEI/Hexmod-Team		v22.0

10 Dependencies

- JAVA JRE version 1.8.0_252_64. For standalone case this JRE is supported as there is backward compatibility issue in latest JRE. For more details please refer story [575372](#).
- JAVA JRE Version 1.8.0_275_64. For Build use cases this JRE version will be called.

11 Known Issues / Restrictions

- HexmodX throws error when running .bat file from server directory path.
- When the complete hex file is deleted, empty 04(Address) records are still present in the hex file.
- HexmodX output bin file is different with PED in ULBA record while merging of BIN files.
- While deleting the block in a hex file, if the address of checksum value of checksum block i.e adCSVal present in another block, HexmodX does not delete that checksum value.
- HexmodX 10.4.1 derives DEV5 and HexmodX 11.1.0 derives as IFX_65NM for the value MCU_RB_IFX_UC1_DEV5_B in merged_corecfg_export.xml file. Version 10.4.1 considered DEV5 value as IFX 40NM device. It leads to different checksum calculation and different output hex file. Hence, use HexmodX 11.1.0 or later to update ABM checksum for IFX 65NM Device 5.
- ConfigHexmod module functionalities are invoked based on the switches present in opt parameters list or .opt file instead of functionality switch.
- ConfigHexmod module functionality not enhanced in .ulf file regarding functionality names.
- HexmodX GUI: Takes more memory when multiple Hex Compare differences windows opened simultaneously.
- HexmodX GUI: Works only with 64 bit JVM.
- HexmodX GUI: Cut, copy and paste pop-up operation across layout is not possible.
- 334926: Patch Signature and Certificate into the HSM configuration area (GUAM) is not tested by the requestor as HSM GUAM software is not available yet.
- Call String entry is missing when *--optionalLogFilePath, --disable_checksum_for_data_len_zero* parameters are passed along with main XML file.
- 440303: Cleanup functionality support for MDG2 is not tested by requestor due to unavailability of PVER.
- Acceptance test feedback for VRTE Valid Pattern XML generation is not provided by user/requester.
- MDG2 Multiple Link-Chain functionality is in development phase hence feedback is not given.
